INTRODUCTION

This booklet contains annual average and **seasonally adjusted** monthly estimates of nonagricultural wage and salary employment by major industry division in Massachusetts for the years 1983 through 1993. These nonagricultural employment estimates are based on a survey of employers conducted monthly as part of a federal-state cooperative program. Employment estimates are adjusted annually to a more recent comprehensive count of employment.

The seasonally adjusted data are available only at the statewide level and only for the major industry divisions shown on the tables that follow. The data are not available for years prior to 1983.

Considerably more industry detail as well as data for earlier years are available from the **unadjusted** series. Nonagricultural employment estimates for major labor market areas within the state are also available from the unadjusted series. These unadjusted data are published regularly by the Massachusetts Department of Employment and Training in the periodical Employment Review and in the annual Employment Trends volumes for Massachusetts and the (Primary) Metropolitan Statistical Areas.

This booklet is intended primarily as a supplement to the Employment Trends/Massachusetts series.
